

Visualize data with QuickSight

- **KEY CONCEPTS: Amazon S3, Amazon QuickSight**

Amazon QuickSight helps you analyse data and create visualisations easily. Today we're going to analyse a huge dataset of Netflix shows and movies to create a dashboard that extracts all the juicy insights.

TASKS

1. Upload a dataset into an S3 bucket.
2. Create an account on Amazon QuickSight.
3. Connect your dataset (in the S3 bucket) to Amazon QuickSight.
4. Create a variety graphs, charts and analysis using QuickSight.
5. Publish a dashboard full of insights into your dataset!

Download the Dataset

1. Download [netflix_titles.csv](#)
2. Download [manifest.json](#)

Store the Dataset in Amazon S3

Time to put our dataset in the cloud! We'll use S3 to store the files, which makes it super easy for QuickSight to access later.

STEPS:

- Login to your AWS account
- Open your S3 console - search for it at the search bar.
- Select **Create Bucket**.
- Select the Region closest to you.
- Name the bucket: *nextwork-quicksight-project-enter your name*
- Keep the rest of the settings as default, and select **Create bucket**.
- Click into your new bucket.
- Select **Upload**.
- Select **Add files**.
- Upload the CSV file and the **manifest.json** file into the bucket.
- All done! Select **Close**.

- Copy the S3 URI of your **netflix_titles.csv** file.
- Open your **manifest.json** file in your laptop's text editor - for example, TextEdit (Mac) or Notepad (Windows).
- Replace the URI in the **manifest.json** file with the S3 URI of your dataset:

"s3://nextwork-quicksight-project-enter your name/netflix_titles.csv"

```
{
  "fileLocations": [
    {
      "URIs": [
        "s3://nextwork-quicksight-project-nextwork/netflix_titles.csv"
      ]
    }
  ],
  "globalUploadSettings": {
    "format": "CSV",
    "delimiter": ",",
    "textqualifier": "\"\"",
    "containsHeader": "true"
  }
}
```

- Save your changes.
- Head back into your S3 bucket and select **Upload**.
- Select **Add files**.
- Re-upload the edited **manifest.json** file into your bucket.
- Select **Close**.

💡 Why did the new manifest.json file automatically replace the existing one?

An S3 bucket keeps only one file for each filename!

Since the **manifest.json** file we're uploading has the exact same filename as the existing one, it automatically gets replaced. Be careful whenever you're uploading files into your S3 bucket! If it has the exact same filename as another file, that other file's about to get overwritten

Create your Amazon QuickSight account

- Search for QuickSightSelect
- **Sign up for QuickSight.**
- Sign up for a free trial of the **Enterprise** edition if you don't have an account.
- Enter your details for your QuickSight account - **make sure the email you use is the same email for your AWS account.** Or else you'll run into an error later!
- Make sure you're setting up QuickSight in the correct region - it should be in the same region as the S3 bucket!
- Add a **QuickSight account name:** nextwork-QuickSight-enter your name
 - Select **Amazon S3**.
 - Select **Select S3 buckets**.
 - Tick the box for the S3 bucket you created.
 - Select **Finish**.

Allow access and autodiscovery for these resources

Connect your S3 bucket to Amazon QuickSight

Let's connect our Netflix data to QuickSight! Our data is still in our S3 bucket, and it's time for these two awesome services to meet.

- Click **Next** through QuickSight's welcome introduction - it's all about how QuickSight lets you visualize and analyze data from different sources!
- From the left hand navigation bar, select **Datasets**
- Select **New dataset**.
- Select **S3**.
- For the first field (source name), enter kaggle-netflix-data
- Second field called **manifest.json URI** - Open a new tab to open your AWS Management Console again. Head back to your S3 bucket.
- Select the checkbox next to **manifest.json**, then select **Copy S3 URI**.

New S3 data source

Data source name

kaggle-netflix-data

Upload a **manifest file**

☒ URL
 ☐ Upload

s3://nextwork-quicksight-project-nextwork/manifest.json

Connect

- Select **Visualize**.
- Select **Interactive sheet** to start creating visualisations.
- Select **Create**.

New sheet

☒ **Interactive sheet**

CREATE

Create Your First QuickSight Visualisation

Now we get to the creative part - it's time to create your first visualization! We'll start bringing those Netflix numbers to life with charts.

With QuickSight, you can sort, filter, and customise your data to create visualisations. You can also experiment with different types of graphs like bar charts, pie charts, line graphs, etc.

- You can see on the left hand panel that the dataset's fields are already imported.
- Drag fields into the graph to create visualisations. Let's run through one example together.
- Click on **release_year**.
- Woo! Now you can see a breakdown on the year that these Netflix-featured TV shows and movies were released.
